

HB&G's Commitment to Green Products

HB&G is continually working to meet the ever changing building market. One of the newest and most exciting initiatives in the building community is the industry's commitment to build environmentally and energy conscious homes.

HB&G products are a part of this initiative in three ways:

1. HB&G only uses wood from managed forests to manufacture our wood columns.
2. HB&G is currently using 75% recycled cardboard to package it's products. We are working to use 100% recycled cardboard in the future.
3. HB&G's synthetic products greatly enhance the sustainability of any home. They are designed to last or outlast the life cycle of a home. This helps to reduce the consumption of our forests by eliminating the need to replace similar wood products, conserves the fuel required to bring those wood products to market and reduces landfill waste.

HB&G is committed to find innovative environmentally friendly ways to manufacture, package and ship our products.

It's a way of life...
Since 1880
